Dear Sir:

Prior to examination of the above identified application, please amend claims 1-2 and add new claims 3-32 as follows:

1. (Amended) A temperature controlled ventilation system for a seat, comprising:
 a supply side, annular heat exchanger forming a hole therein about an axis of rotation and configured to allow air to pass outward from said axis of rotation, said supply side heat exchanger comprising a first series of heat transfer surfaces that are aligned with a plurality of axes orthogonal to the rotational axis, at least a portion of the first series of heat transfer surfaces comprising folds of a thermally conductive material;
 a waste side, annular heat exchanger forming a hole therein about said axis of rotation and configured to allow air to pass outward from said axis of rotation, said waste side heat exchanger comprising a second series of heat transfer surfaces that are aligned with a plurality of axes orthogonal to the rotational axis, at least a portion of the second series of heat transfer surfaces comprising folds of a thermally conductive material;
